Single Sign On using SAML2.0

Enable SSO authentication to the Command Center using SAML2.0

Updated on

ON THIS PAGE:

Sections

For security reasons, SonicWall Cloud Secure Edge (CSE) handles Admins and Users completely separately.

- **Admins** manage access control security policies via the Command Center and API.
- **Users** use their Devices to access Services that are secured by CSE's enforcement components. To manage users, refer to the articles on configuring IDPs.

Admin access to the Command Center can be configured for Single Sign On Identity Provider via the SAML2.0 protocol. Follow the instructions for a [generic SAML IDP](#), or see step-by-step instructions for [Okta](#) and [Azure AD](#).
